

Inspection of lifting equipment

Product information

We perform annual control of lifting gear with regard to obedience to legislation, which stipulates that lifting gear must be checked for the user's safety. We control the lifting equipment ocularly or for example by means of non-destructive testing.

Our inspection work involves

- Various load tests
- Calibration of crane measuring systems and load cells
- Periodic maintenance of lifting, IACS certified equipment
- Break load test – up to 900 ton
- Class certification tests
- NDT testing – level 3

All lifting equipment and fall protection must be marked with information about the inspection carried out.
Check the tag on your equipment before use!

Book service inspection

Contact us to order a service inspection of your lifting equipment, fall protection equipment or crane, and we will return as soon as possible.
